

Blissful Bloom

MICRONIZED FLOWER POWER
0-10-1

Sensational Solutions crafted a micronized blend of natural ingredients to encourage bulky and aromatic flowers and fruits. **Blissful Bloom** is a natural phosphorus source to be used as an alternative to conventional chemical fertilizers. **Blissful Bloom** goes readily into suspension, so it can be used in most systems without clogging lines or emitters. Incorporate **Blissful Bloom** with **Micronized Compost Tea** to make a bloom tea for your soil or foliar spray.

Directions:

Plant size, growth stage and variety may affect fertilizer usage

Water in Application Rate: Mix 1/4 tsp - 2 tsp per gallon of water every 1-3 weeks during flowering stage, increase fertilizer strength if needed. When watering into soil or soilless medium, adjust solution pH to 5.5 - 6.5 for best results. Reduce application rate if other full strength fertilizer is being used at the same time. If desired, use 1/2 tsp per gallon of water during the first few days of flower cycle to trigger plant into bloom faster.

Soil Amendment Application Rate: Sprinkle evenly into soil every 2-4 weeks at a ratio of 1/4 tsp - 2 tsp per cubic foot, increase strength as needed.
