PLANT. LIFE. PRODUCTS.

VEG+  
BLOOM

[veg bloom.com](http://veg bloom.com)

## RO/SOFT

VEG+BLOOM RO/SOFT nutrient powder is formulated for growers using RO water, soft water, or source water with low alkalinity.

## TAP/HARD

VEG+BLOOM TAP/HARD nutrient powder is formulated for growers using tap or well water high in alkalinity.

## DIRTY

VEG+BLOOM DIRTY is enriched with organic compounds and pH ready for Peat/Soil mixes. It works extraordinarily well in Hydroponics as well. Dirty grown products will be super rich in sugars and essential oils.

## HD

HD is best for rock wool, and other inert hydroponic media. PH tends to swing and it must be kept in range in the reservoir and within the root zone. Smaller container size is ideal for keeping root zone pH in range through frequent irrigation.

## +LIFE

+LIFE is a complete microbial inoculant. A powdered source of probiotics with a blend of beneficial bacteria and fungi. +LIFE helps your plants uptake all the nutrients they need to thrive. +LIFE also helps prevent the spread of negative bacteria and root pathogens.

## PUSH

PUSH provides an extra opportunity for growth by feeding plants through their stems and leaves. PUSH elevates the demand for cell division and increases the uptake of silica.

## SHINE

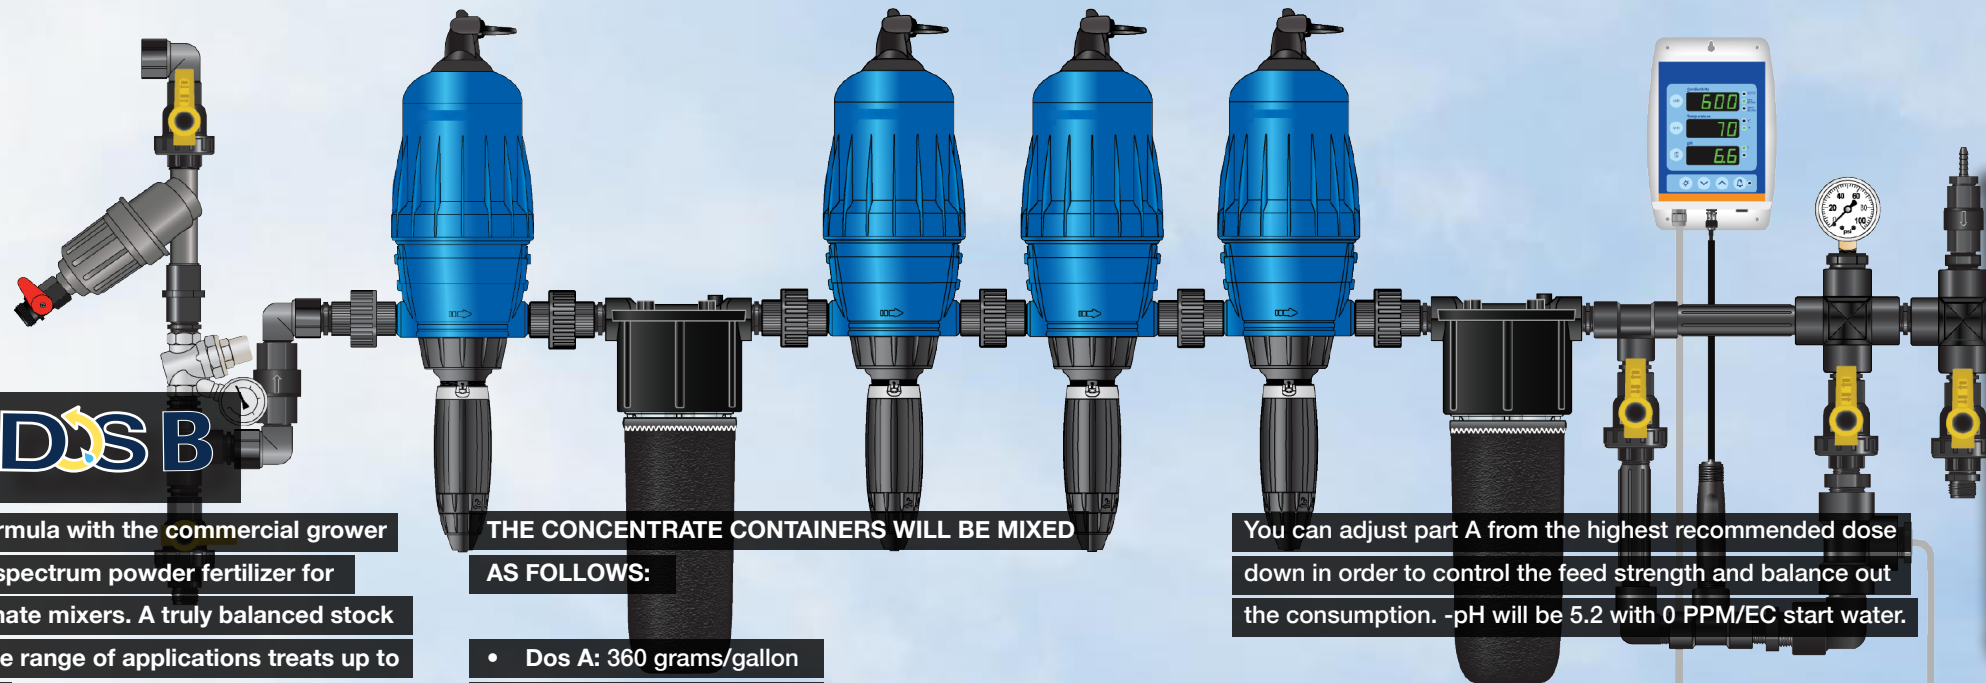

SHINE is flowering phase additive triggering an immune response that increases terpenoid production and disease resistance. With a combination of bioavailable minerals, L-amino acids and plant derived hormones for bulking and ripening of flowers bringing out the oils during the flowering stage.

## stackswell

STACKSWELL is a super concentrated growth powder. Works well with any base and in all mediums. It can be used by the gram for reservoirs or mixed into a concentrate for dosers and fertigation systems. Crafted to maximize root and shoot growth stimulation replacing all calcium magnesium supplements.

**DOSA** **DOSB**

Our 2 part powdered formula with the commercial grower in mind. A two part full spectrum powder fertilizer for injectors and proportionate mixers. A truly balanced stock concentrate. With a wide range of applications treats up to 20,000 gallons of water.

• Recommended pH: Coco (5.9-6.0) Hydro (5.4-5.8)

THE CONCENTRATE CONTAINERS WILL BE MIXED AS FOLLOWS:

- Dos A: 360 grams/gallon
- Dos B: 240 grams/gallon
- Recommended pH: Coco (5.9-6.0) Hydro (5.4-5.8) -Fine in peat moss with a water hardness of + 0.5 EC

You can adjust part A from the highest recommended dose down in order to control the feed strength and balance out the consumption. -pH will be 5.2 with 0 PPM/EC start water.

# ONE PART ALL PHASE POWDERED PLANT NUTRIENTS

Hydroponic Research Veg+Bloom nutrients use highly micronized minerals combined with clean and pure organic materials to create an unparalleled hybrid blend of easy-mixing and bioactive powders. Sourced in the U.S.A and blended in California.

## SIMPLE

No more complicated feeding schedules. Our one part bases are for all phases of growth. Easy to follow directions. A few scoops into water and your plants are set up to thrive.

## AFFORDABLE

A stable single solution that costs cents per gallon.

## COMPLETE

All the essential elements and beneficial additives your hungry plants crave. Our bases are formulated for a wide range of mediums and water qualities.
